...NEW SERVICE SOLUTIONS

Changes in engine technology require changes in diagnostic service procedures. With the introduction of General Motor's Spark Ignited Direct Injection (SIDI) engine, new procedures for diagnosing vehicle driveability issues are required and new procedures call for new tools.

The previously essential Active Fuel Injection Tool (642-CH-47976), when used with the (Part No. 642-CH-47976-500) SIDI AFIT Adapter Kit, automates the diagnostic process and provides accurate, reliable information about all elements of the fuel injection system. This adapter kit ensures the technician is diagnosing the correct component failure within the vehicle engine.

The new SIDI Adapter Kit provides you:

- Fast & Accurate Diagnosis (10 minutes)
- Elimination of Vehicle Comebacks
- Enhanced DTC Diagnostics
- Downloadable Test Results to PC

Diagnoses Multiple Fuel System Concerns:

- Crank No Start
- Hard Start
- Power Loss
- Misfire Codes
- Injector Wiring Codes
- Bank Lean/Rich Codes

This tool must be used with previous essential 642-CH-47976 AFIT tool. **\$1,875.00**
