

The Solution for Chrome Clad Wheels

In Support of GM Service Bulletin #09-03-10-016
**Wheel Balancing Machine Finish Damage
to Chrome Clad or ChromeTech Wheels**
dated December 1, 2009.

Many GM vehicles offer Chrome Clad style wheels today, as outlined in the bulletin. It's been determined that using the old style cone shape balancing adapters with the typical flush mount clamping hub screw will damage the chrome finish of the wheel. These newly designed wheel balancing adapters have been tested and proven to prevent finish damage to chrome clad wheels.

We're offering three different kits depending on what style adapters you're using today.

- If you're still using the old style cone/hub clamp set up, then you need kit **119-EAK0221J74AGM** – Complete with five centering collets and three precision lug centering plates and pins.
- If you already have the new style Collets, then you only need **119-EAK0221J76AGM** – Three precision lug centering plates and pins.
- If you already have the new style adjustable plates, then you only need **119-EAK0221J75AGM** – Five centering collets.

119-EAK0221J74AGM – GM Plate and Collet Set

Three dedicated pin plates and studs and five precision collets. Specific to fit all GM cars and light trucks. Precision collets pilot the inner pilot wheel center. Precision collets provide accurate centering and will not contact the outer pilot wheel center to prevent damage. Dedicated pin plates and studs accommodate all GM 4, 5, 6, 8, lug configurations. Pin plates pilot the outside of the wheel via the lug holes. Precision pin plates aid in precision wheel centering. Pin plates guarantee wheel balance clamping nuts do not contact the wheel face during clamping.

Dealer Price...\$871
Promo Price...\$769

119-EAK0221J75AGM – Collet Set Only

Five precision collets specific to fit all GM cars and light trucks. Precision collets pilot the inner pilot wheel center. Precision collets provide accurate centering and will not contact the outer pilot wheel center to prevent damage. Must be used with dedicated plates (not included) which pilot the outside of the wheel via the lug holes.
